## **DETAILED ACTION**

## Election/Restriction

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-11, drawn to an exciter assembly, classified in class 74, subclass 61.
  - II. Claims 12-13, 20-30, drawn to compacting roller with vibrating means, classified in class 404, subclass 117.
  - III. Claims 14-19, drawn to a compacting roller with vibrating means, classified in class 404, subclass 117.
- 2. The inventions are distinct, each from the other because of the following reasons:

  Inventions Group II and Group I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require for the free swinging eccentric weight to have a first and second angular position wherein the swinging eccentric weight either adds or detracts eccentricity to the exciter. The subcombination has separate utility such as an exciter for a tamping plate.

Application/Control Number: 09/713,659

Art Unit: 3673

- Inventions Group III and Group I are related as combination and subcombination.

  Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require for the free swinging eccentric weight to be restrained from axial movement along the exciter shaft. The subcombination has separate utility such as an exciter for a tamping plate.
- 4. Inventions III and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination as claimed does not require for the free swinging eccentric weight to be restrained from axial movement along the exciter shaft. The subcombination has separate utility such as an exciter for a rotating drum wherein the free swinging eccentric weight does not have to have a first and second angular position wherein the swinging eccentric weight either adds or detracts eccentricity to the exciter.

5. Because these inventions are distinct for the reasons given above and have acquired a

separate status in the art as shown by their different classification, restriction for examination

purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an

election of the invention to be examined even though the requirement be traversed (37

CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the

inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently

named inventors is no longer an inventor of at least one claim remaining in the application. Any

amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the

fee required under 37 CFR 1.17(I).

8. Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Sunil Singh whose telephone number is (703) 308-4024.
